

TATHYA

Democratizing Data

Scan to see
Tathya in Action

What if we could solve the broken search bar for MSMEs?

It is that simple. But perhaps not as easy.

MSMEs Are Data-Rich but Insight-Poor

ANYONE

63M *MSMEs employ half of India's workforce - but face info overload*

ANY TIME

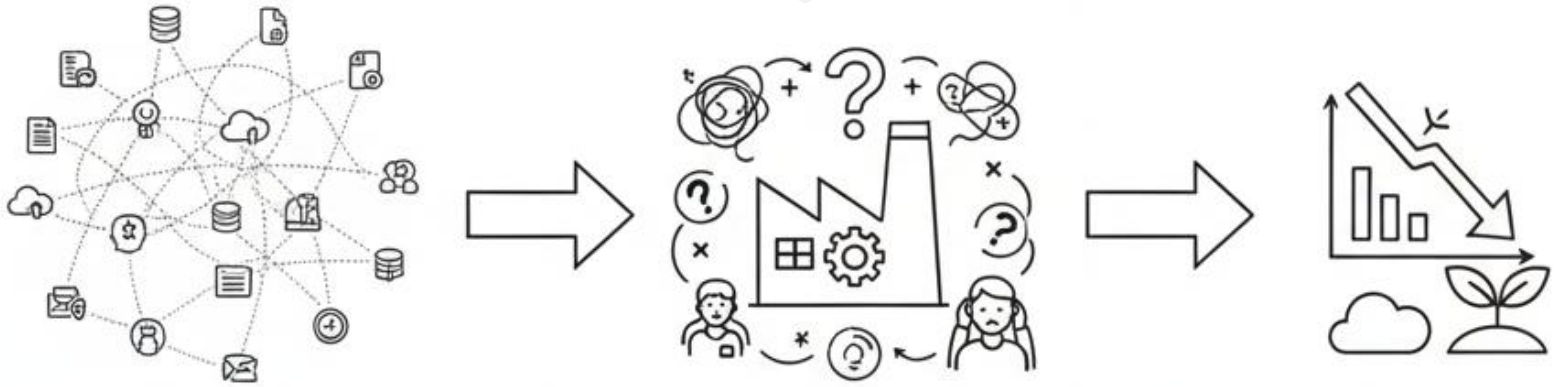

*MSMEs spend **time** chasing data, not using it*

ANYWHERE

40+ *scattered portals, schemes and compliance norms*

AT SCALE

Need for a trusted, interoperable interface to discover and grow

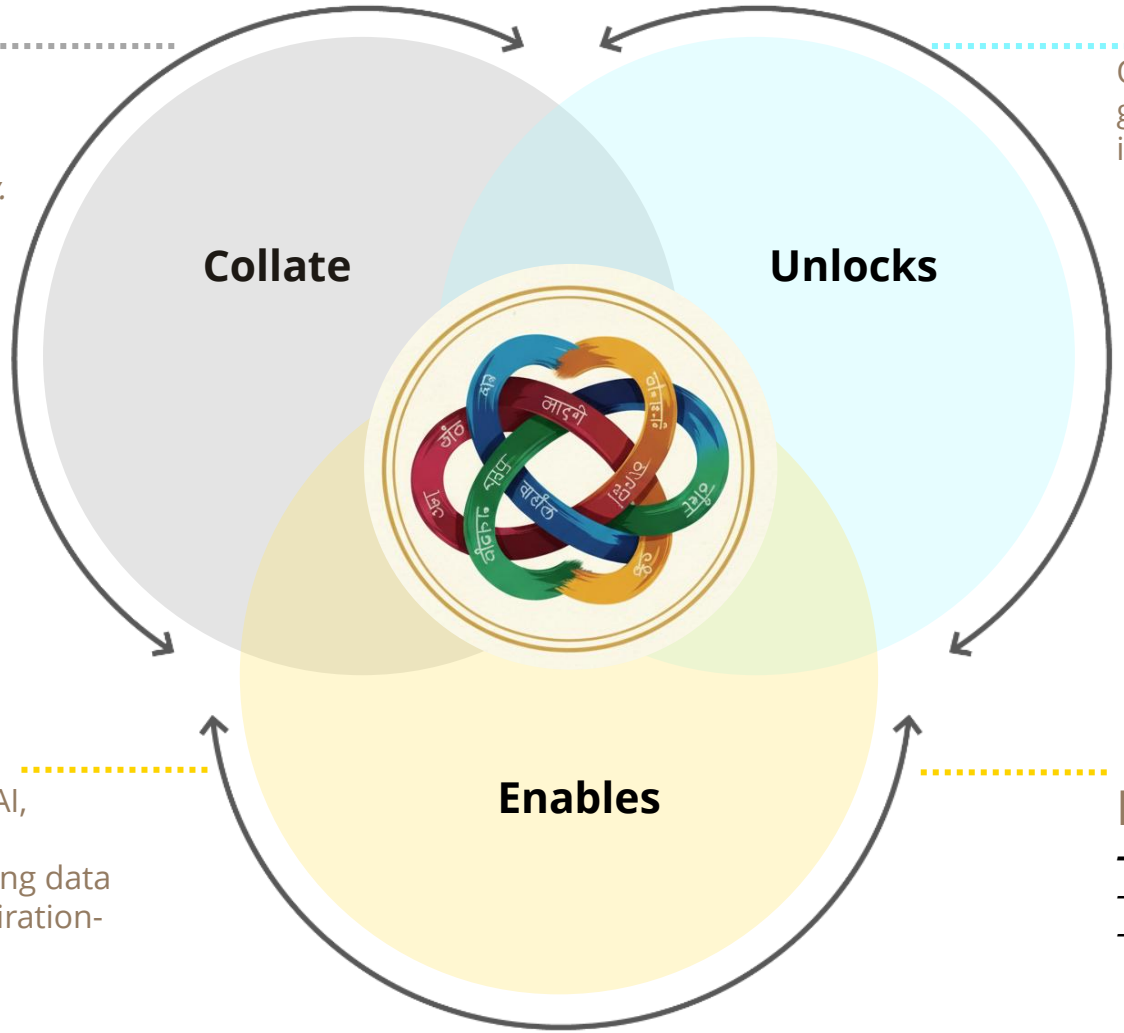

OUR SOLUTION

TATHYA: A DPI for AI enabled India

Gather and integrate fragmented data streams responsibly, ensuring interoperability and privacy.

Overcome barriers through governance and design, making insights trustworthy and accessible.

Return value to users via AI, human-centred tools, and collaborations, transforming data into opportunities for aspiration-driven growth.

Key Use Cases

- *Where Should I Export?*
- *Which Benefits Am I Eligible For?*
- *How Do I Get Certified to Export?*

ECOSYSTEM-FIRST, NOT APP-FIRST

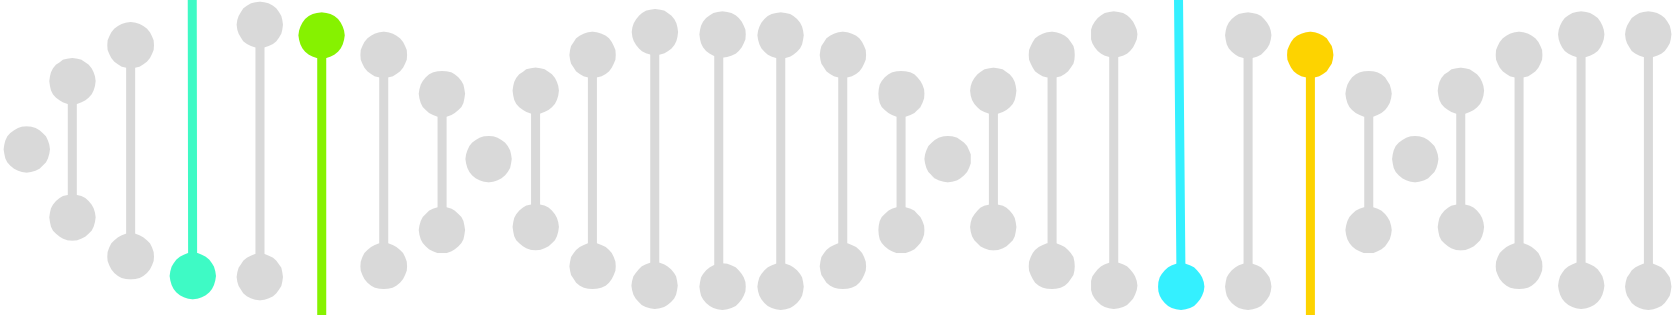

TATHYA is Not a Super App - It's a **Super Network**

Open Interoperability

Built on protocols that integrate government and private data sources via open APIs, allowing seamless data collation from trade, schemes, and compliance portals. This breaks silos

Decentralized Empowerment

No vendor lock-in or centralized control—data ownership stays with users, and tools can be hosted or extended by any stakeholder. This promotes trust and innovation across the ecosystem.

The DPI that gives India's **63 Million** MSMEs a right to

Win!

Modular Flexibility

Features plug-and-play tools, which are voice-accessible, multilingual, and action-oriented. Entrepreneurs can mix modules for personalized use cases, adapting to needs without a rigid app structure

Collaborative Governance

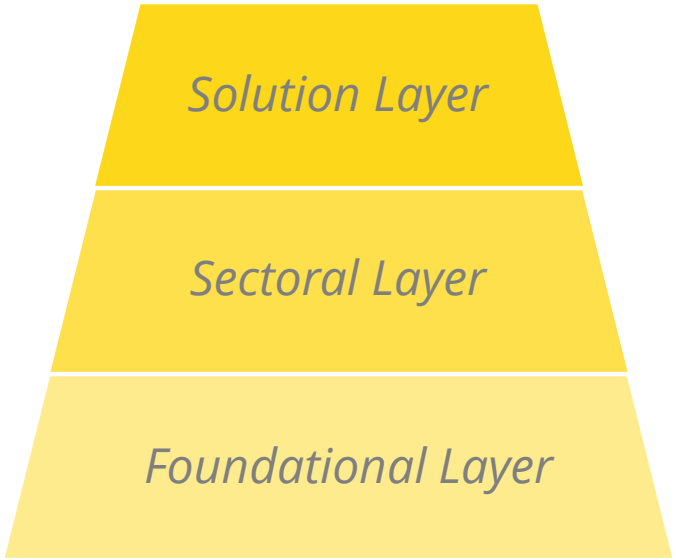

Focuses on rules for ethical data sharing, privacy, and public value, involving all actors (MSMEs, government, providers) in co-creation. This transforms scattered data into a shared infrastructure, fostering partnerships that drive systemic change.

Where We Fit in the DPI Stack

1 *Minimal & Modular*

2 *Sectoral Bridge*

3 *Built for Trust*

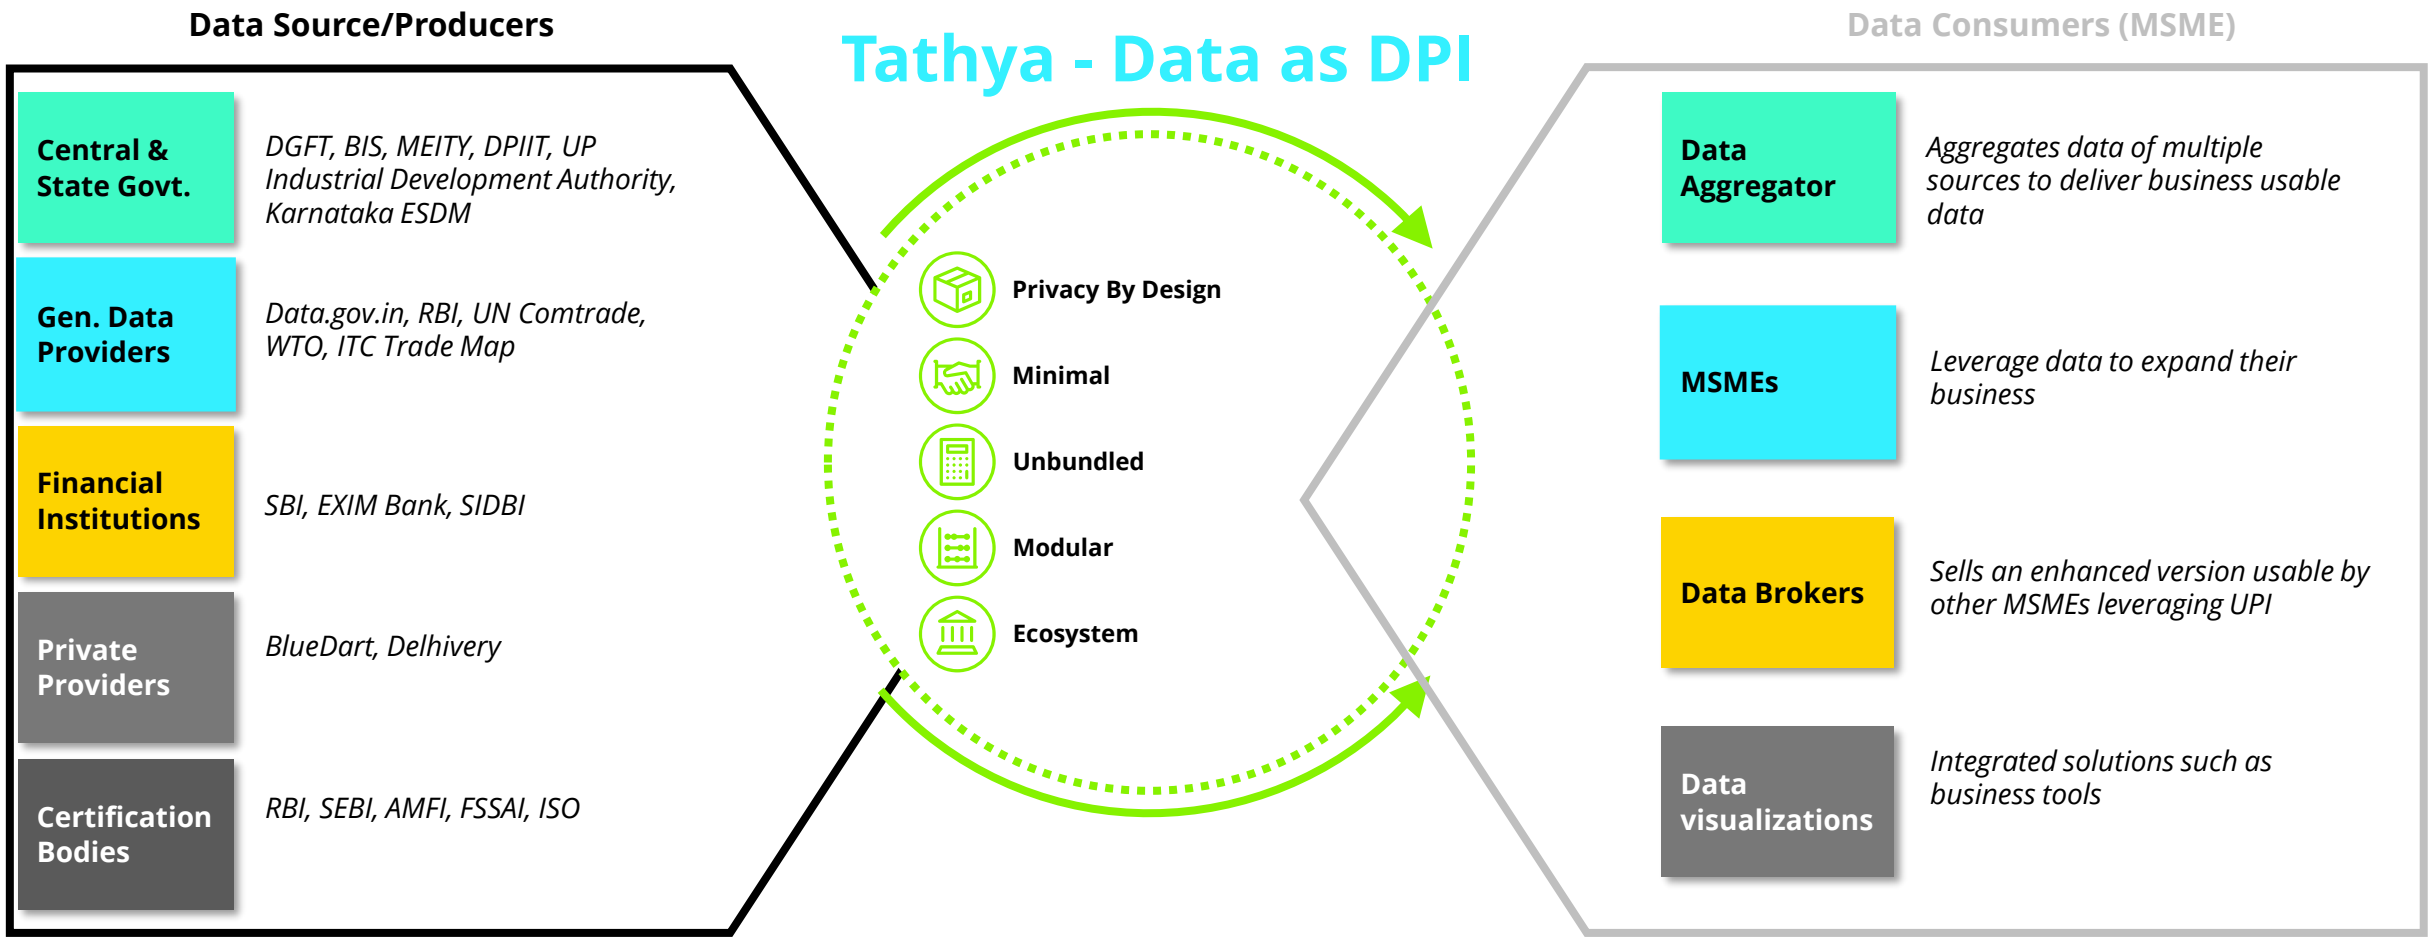

Private Apps, Form Assistance, Credit Scoring Tools
Tathya acts as a plug-in interface for innovators to build tailored MSME solutions

Tathya
The growth intelligence layer connecting multiple MSME-facing data systems

Aadhaar, Udyam
Serve as input sources for MSME data verification

TWO-SIDED NETWORK

Value Network

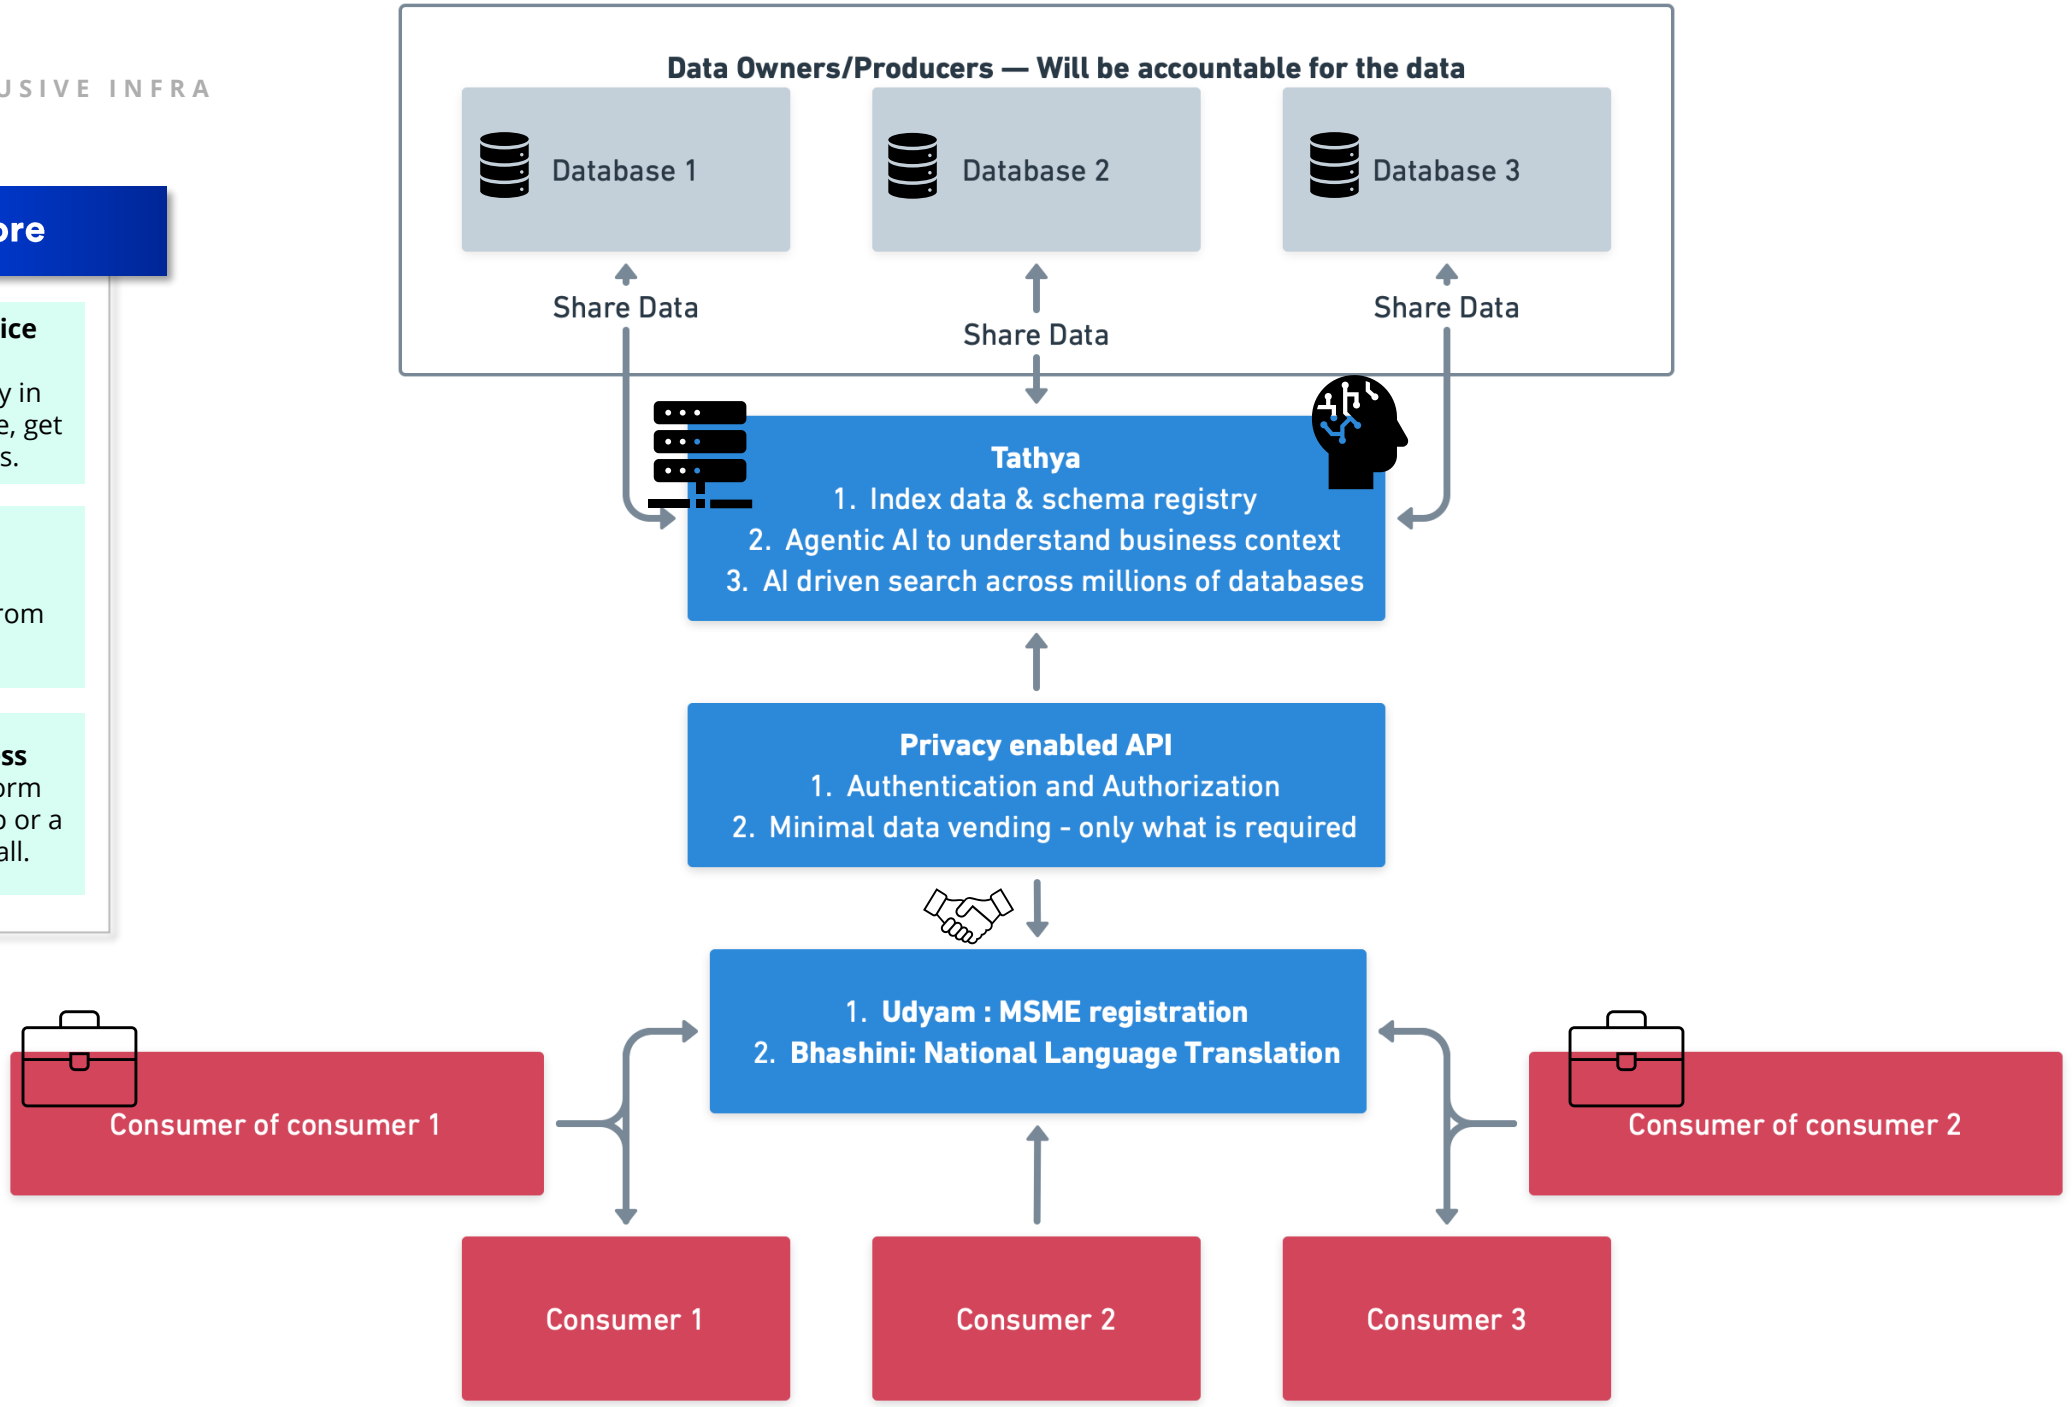

✓ SAFE ✓ Accountable ✓ Trusted ✓ Relevant

Inclusive At Core

Multilingual Voice Interface
Speak your query in your own language, get instant answers.

Vernacular Onboarding
Your language, from the very start

Low Tech Access
Access our platform through WhatsApp or a simple phone call.

Tathya:DPI

Use case on top of use case	• Connecting niche manufacturers with exporters • MSME to assist other MSMEs with govt. schemes	
Use Case Apps	• Leading Exports • International vendors	• Manufacturing specs • Govt. Schemes access
Discover & Access Service	• Unified catalog search • API Gateway	• Semantic search • AI SchemeBot
Privacy Controls	• Privacy Management • Data Auditing	• Consent Framework
Onboarding Service	• Data Registration • Metadata Catalog	• Schema Detection • Quality Validation
Data Providers	• Government Ministries • NGOs	• Private Companies • Intl. Organizations

Pathways for Scale and Sustainability

Public Core, Ecosystem Model

Core infrastructure (registry, onboarding, catalogue, orchestration service) is always publicly funded; third parties build atop APIs/insights for innovation.

Incentive Models

Free entry-level access with fees for premium analytics/advanced features; value-added services, co-branding, and revenue sharing for contributing organizations.

Outreach and Adoption

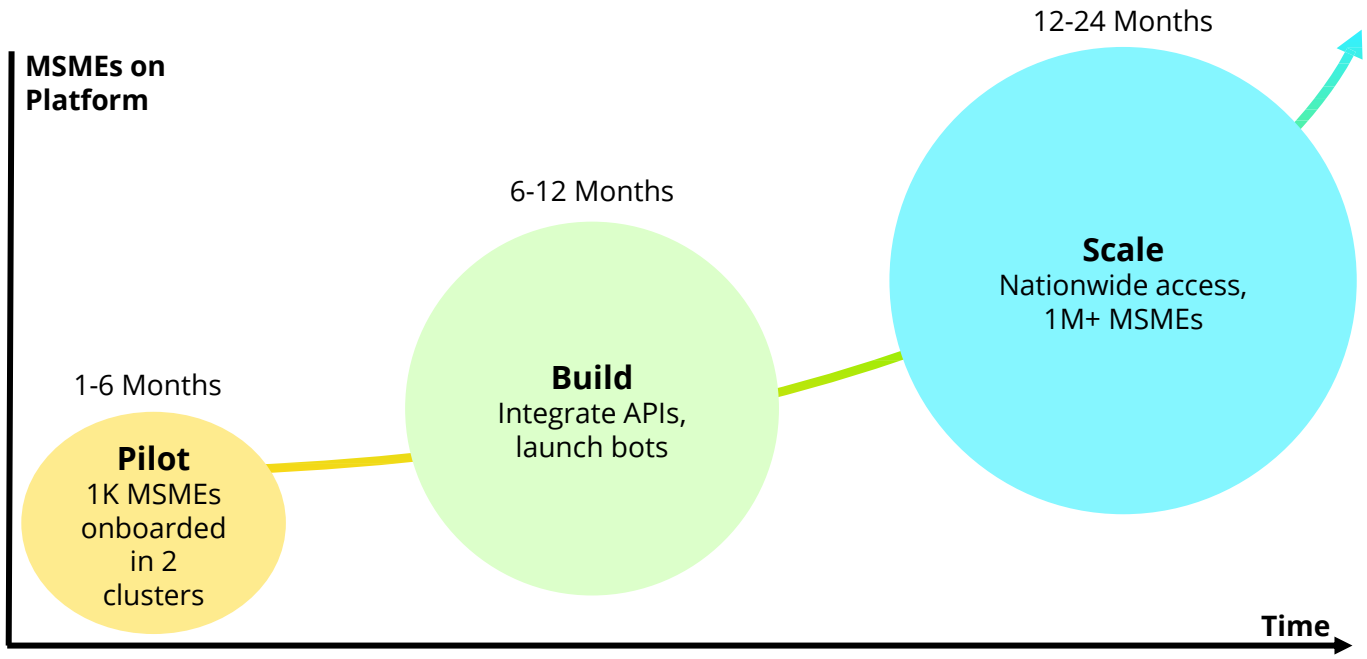

National and state-level campaigns, challenges for startups/researchers, partnering with trade bodies, women entrepreneur groups, and rural SHGs.

Technology Renewal

Regular technical and standards upgrades, open calls for innovation, and encouragement of independent audits and external reviews

Continuous Feedback and Governance Renewal

Systematic feedback loops, digital "public consultations," hackathons, and ongoing UX/UI/usability upgrades in response to user needs

Global Partnerships

Collaboration with similar international platforms (e.g., Singapore's GovTech, EU's Open Data initiatives), opening Indian (anonymized/aggregate) datasets for trusted international use cases.

EXECUTION

Stakeholder Roles

DPI Authority (Operator)	Governance, technical operations, onboarding, consent registry, interface management, API ecosystem, compliance.
Government Ministries/Entities	Data onboarding, setting sectoral standards, data curation, funding participation, use case championing.
Private Sector (Banks, Industry Assns.)	Data contribution (onboarding/reporting), compliance, co-creation of value-added services, app ecosystem evolution.
Research/Academic Orgs.	Research datasets onboarding/discovery, data validation, use case development, governance co-creation.
Facilitators (CAs, Udyami Mitras, NGOs)	Last-mile user enablement, use case localization, outreach/training, feedback loops to improve usability.
Technical Standards Body	Setting/monitoring interoperability, security, privacy, and API standards.
Privacy & Ethics Oversight Board	Independent audit, dispute resolution, policy recommendation, privacy/security violation monitoring.
End Users (MSMEs)	Adoption, feedback to improve UX/UI/policy, community-led innovation, responsible data usage.

Institutional Mechanisms

1. Multi-Stakeholder Governance

- **Steering Committee**
- **Technical Working Group**
- **Sectoral Sub-Groups**
- **Privacy Oversight Board**

2. Dispute Resolution Framework

Arbitration and ombudsman mechanisms for addressing stakeholder grievances or data access conflicts.

3. Legal/Statutory Enabling

Notification as public infrastructure with legal backing for data onboarding, interoperability standardization, and privacy rights.

SEEDED. IMPACT

The hustle to get things done.

Building for everyone. All MSMEs. All access.

Lever

Belonging

Inclusion + **Trust** +  = **Unlocked Potential for MSMEs**

Shifting the digital paradigm from **text-first to voice-and-vernacular** using Bhashini. This removes the primary barriers of language and digital literacy

Creating a single source of truth by unifying 40+ portals like **MSME Champions, Nivesh Mitra, and Startup India** - verifiable answers

Core Tathya Infrastructure

Discoverable. Accessible. Convenience for MSMEs

Expected Outcomes

On-ramp millions of **informal and women-led businesses** into the formal growth ecosystem.

Increase the uptake of digital tools and government schemes among rural and non-English speaking entrepreneurs.

Increases first-time application success, tackling the **~35% rejection rate** caused by documentation errors and encouraging formalization (Source: IFC, TransUnion CIBIL reports on MSME credit).

- **Democratized Access**: Democratizing access to real-time trade intelligence by querying DGFT, GSTN, and more.
- This turns high-cost, expert-only information into a free, on-demand public utility for MSMEs
- Reduces the average **20-25% of management time** spent on compliance research to minutes, (Source: World Bank, ORF).

VIKSIT BHARAT

Enable 63M+ MSMEs, drive social impact – promoting an Atmanirbhar Bharat, promoting Make in India

MSMEs make faster, data-driven decisions on their global GTM

BRANDING

What we stand for. Why you should care.

The Name

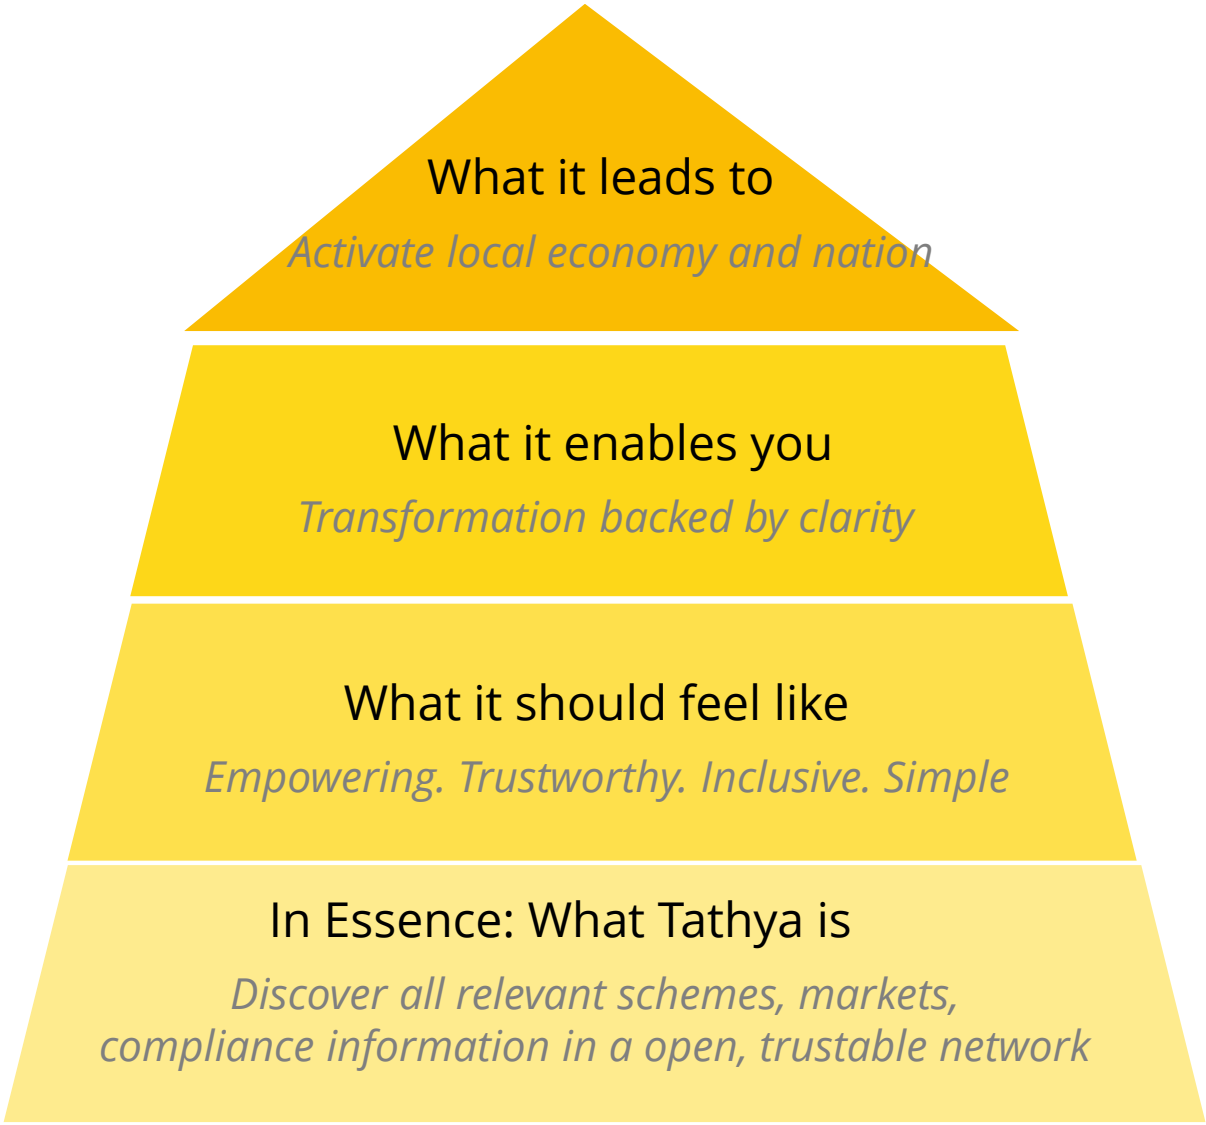

TATHYA

Means 'Truth' - rooted in trust, transparency and empowerment
Reflects its mission to enable authentic, verifiable data accessible to every MSME in India

The Logo

Interwoven loops symbolizing infinite data flows - interconnected and evolving
Each loop in a different color and language for different datasets, organizations bound together by trust

Refinement through roadmap development

PHASE 1 (6-12 Months)

Foundation and Proof of Concept

- **Develop the core platform** using open, federated architecture with focus on consent-based access, privacy by design, and interoperability
- **Initiate** with a few ministries or entities (such as Ministry of Commerce) onboarding select datasets through a self-service portal and automated indexing
- **Open the platform for programmatic access** - allow third parties to build applications, connect federated queries

PHASE 2 (12-24 Months)

Ecosystem Expansion

- **Widen Entity Onboarding** by rolling out onboarding support across ministries, state departments, private companies, and industry associations
- Build **incentives for data contribution** (e.g., data credits, value-added services)
- Provide **regional language interfaces**, mobile-first approaches

PHASE 3 (24-48 Months)

Scale and Sustainability

- Activate **multi-stakeholder data governance committee**, technical standards working group, and privacy/ethics oversight board
- Ongoing standards revision, **innovation challenges** to broaden use case landscape, new stakeholder entry (startups, NGOs, global organizations)

SHOW,DON'T TELL

Like MSMEs, we hustle and get things moving
